

Day 19

Bypass the login page via Burpsuite Practice in Portswigger labs :

There are basically two methods:

- 1. You have highly suitable wordlist for bypass**
- 2. the another method is to bypass the login page via intruder in burpsuite in portswigger lab.**
- 3. Via sql injection Union attack we retrieve the password .**

Lab: SQL injection UNION attack, retrieving data from other tables

PRACTITIONER

LAB

Solved

This lab contains a SQL injection vulnerability in the product category filter. The results from the query are returned in the application's response, so you can use a UNION attack to retrieve data from other tables. To construct such an attack, you need to combine some of the techniques you learned in previous labs.

The database contains a different table called `users`, with columns called `username` and `password`.

To solve the lab, perform a SQL injection UNION attack that retrieves all usernames and passwords, and use the information to log in as the `administrator` user.
